SPECIALIST IN CONCRETE FLOORING

Today's Construction world is the outcome of new ideas, latest technology, new concepts and a dream of individuals and companies who see a challenge in every tomorrow is at SHUBHAAM today.

SHUBHAAM based in Mumbai - India since the past 20 years is a well reputed company, one of the leading providers of Complete Concrete Flooring Solutions with in-house facilities to Design and customize every flooring requirement to the customers satisfaction. SHUBHAAM delivers enhanced flooring solution with the latest international standard at a reasonable pricing, backed by a chain of exceptional supply, service & support. We specialize in Tremix applicable in Industries, warehouse, residential basement & podium car parking area, road & airport etc. and also decorative floor like Designer Concrete.

TREMIX (VDF FLOORING) :

The Vacuum Dewatering System TREMIX is for laying high quality concrete floors where the cost being very economical. The compressive strength of vacuum treated concrete at the age of 28 days is 30 to 60% higher than that of normal concrete

The key to the use of this method is the dewatering of concrete by vacuum process where surplus water from the concrete is removed immediately after placing and vibration, reducing the water: cement ratio to an optimum level. Therefore, adopting the Vacuum Dewatering Flooring method facilitates use of concrete with better workability than what is normally possible. A lowered water to cement ratio due to vacuum dewatering leads to improvement in each of the concrete properties.

Floor Hardeners:

These based Three component metallic & non-metallic base screed composition. Our range is available in both natural & colored formulations in different packaging as per the client's requirements. The use of such hardeners makes the flooring durable and decrease recurring expenses in repairs.

PP fibers :

PP fibers specially made only for concrete application. It is blend of micro & macro fibers, as length of fibers vary from 24mm to 40mm. The long length of fiber holds together different components of concrete together, while shorter length fibers(which have lower diameter) increases the number of fibers, thereby providing better reinforcement, crack prevention and increase in strength of concrete. It has been used in floorings, roads, slabs and other load bearing structure.

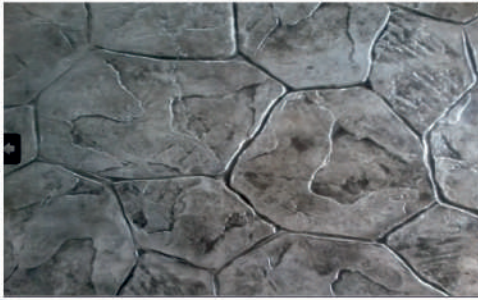

Steel Fiber:

Steel Fibers are Short Discrete lengths of steel which can be dispersed or mixed in fresh concrete to Form steel fiber reinforced concrete (SFRC).

- Fibres increases productivity by eliminating the process of laying wire mesh
- Fibres increases the quality of slabs in terms of less shrinkage cracks and better impact and fatigue resistance
- Fibres contributes to sustainable construction by reducing the usage of concrete and steel

RANDOM STONE

Designer concrete is a system of adding color, pattern and texture to a plain concrete slab at the time of pouring. A finished Designer concrete surface gives an attractive, three-dimensional, two-toned appearance. Using this method, you can create the realistic effect of slate, stone or even wood.

HERRINGBONE

NEW WEAVE BRICK

Many different effects can be achieved from ancient cobble patterns to contemporary stone block, or a classical Mediterranean tile. Edges of plain, matching or contrasting patterns can be added and the product can be applied to steps. The finished job is sealed with a protective coating which helps protect the product from dirt and staining. This further improves the overall strength of the surface, and gives the job an attractive 'wet-look'. An anti-slip finish can also be applied.

ARIZONA SHEAMLESS STONE

WOODEN PLANK

Area of application :
Designer concrete can be used indoors or outdoors

ROYAL ASHLER

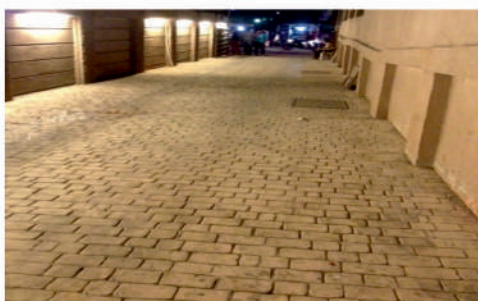

COBBLE STONE

Roads, parking lots, pedestrian walkway and shopping centers, Bungalow

GARDEN STONE

Public areas such as footpaths, School Grounds Pool surrounds Driveways, Paths, Patios, Garden Area, Arcades and pool surrounds and also for anti slip ramp.

COUNTRY COBBLE STONE

ASHLER STONE

Laser Screed Technology

REVOLUTION IN CONCRETE FLOORING SYSTEM

FLATER FASTER FLOOR WITH LASER PRECISION

Laser controlled screeds are driven during concrete pouring and the auger Attached in front of the vibrating beam distributes excess concrete evenly.

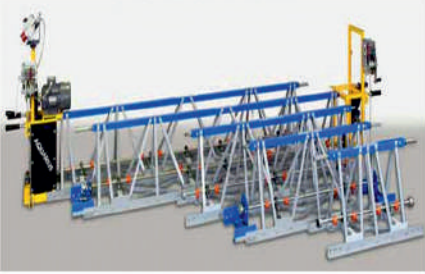

It drastically reduces time, Labour, number of construction joints and eventually improves the flatness of floors. Laser controlled screeds can produce 800 to 1000 Sq. Mt. in a day. Depending on the circumstances such as planning, Concrete supply and access to the slab.

Laser controlled screed machines are usable on deck slabs as long as the construction of the deck can allow their weight. Laser Screed can also be used on well spaced reinforcement mesh, with the option of using four extra wheels for support.

Now
Introducing

Truss Screed Technology

- Flex screed is the surface vibrator of modular construction, ideal for varying panel widths upto 10mtr
- Standard sections of 1, 2 and 3 mtrs. length. Special lengths on request.
- Individual sections to be joined together to suit the panel width.
- Individual sections carry eccentric shaft; hence uniform vibrations throughout the vibrator length.
- Option of manual or electric winch.
- Turnbuckle provided to give camber at each joint up to 10 mtr.
- Truss screed can also be used on well spaced reinforcement mesh, SFRC (steel fiber reinforcement concrete), PPFRC (poly polymeric fiber reinforcement concrete) ScFRC (structural fiber reinforcement concrete).
- Best option for Very-Narrow – Aisles (VNA) Forklift Operations
- Loads Can be Lifted and Stored higher
- Reduce Forklift Maintenance
- Reduce Floor Maintenance
- Minimised cracking & spalling

It increases productivity, flatness quality & efficiency with Truss screed as compared with conventional method or traditional flooring method.

TURSS SCREED system can work on low slump concrete, steel fiber & PP fiber reinforced concrete & Enabling high strength, dense, durable floors

Polished Concrete

Designed For Industrial Concrete Floors

Official BECOSAN applicator

Technology is making the world an easier place to live in. Concrete floors research has come out with new vision. As we believe customers satisfaction is first Priority. The acceptance to learn new things and with simple economical, eco friendly with spark of an idea we bring floor with Mirror Finish Shine.

The Polished Concrete floor system turns concrete **as shiny as glass** so imagine an extremely hard reflective floor that not only look great, it is very functional, hygienic and extremely low to maintain. The polished concrete system produces a high quality finish and has many advantages over other products of similar cost.

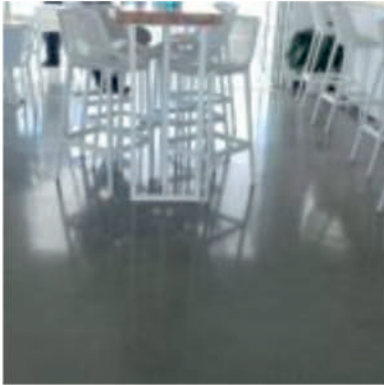

Bring out the strength in your concrete floor :

Concrete floors deserve better treatment than just being walked on. Polished Concrete will really make you appreciate the advantages of having concrete as an exposed floor surface. Grey concrete floors are transformed into brilliant, easy-clean, environmentally – friendly and durable polished concrete floors.

Advantages Polished Concrete :

Harden and dust proof concrete surfaces Reduce permeability of concrete to water and oils Improve floors in warehouses, factories, industrial locations, car parks, etc.

Provides maximum water repellency combined with hardening, densifying and sealing characteristics to provide long term protection against staining and deterioration.

"The new Flooring Experience"

Thermoplastic Road Marking Paint

SPECIALIST IN CONCRETE FLOORING

Thermoplastic Road Marking Paint

Thermoplastic Road marking material is a formulation of plasticized resin, aggregate pigment and glass beads supplied in dry powder form, heated and applied to the road surface where it very quickly cools and sets. The material consists of 100% solids and environmentally friendly as it is solvent free. Thermoplastic road marking are generally regarded as superior to and more cost effective than paint marking as they have better durability, reflectivity, visibility and provide less traffic disruption during application.

Services :

- Parking Thermoplastic Paint Marking Service.
- Parking Paint Number Slot Marking.
- Thermoplastics Paint Arrow Marking Service.

Our client :

- Sharda Chambers
- Sushil Samir CHS Ltd.
- Shivtapi CHS Ltd.
- Gurukrupa Developers - Marina Enclave
- Lodha Group - Xperia Mall
- Lodha Group - NSIL, I Think
- Lodha Group - Nuevo, Golf Link.
- Omkar Altamonte
- Padmavati Complex CHS Ltd.
